

Growing Enterprise-wide with DocuClass

Although DocuClass can start as a departmental solution, it can easily and safely grow to become an Enterprise wide solution, regardless of the size and the requirements of your business.

Successfully deploying and maintaining applications enterprise wide is a complex task. The success depends on the following factors:

- Application capabilities & architecture
- Available infrastructure (servers, database, network, etc)
- Consulting services used to design the optimum working environment (in terms of price & performance) and to fine tune the system (hardware & software)
- Established processes and tools used to monitor and improve system behavior, as well as system maintenance and upgrades simplification

DocuClass has been designed to meet large enterprise needs:

Reliability and Availability: DocuClass can guarantee minimum or zero downtime, based on available infrastructure. In other words, DocuClass will run continuously without failure. Additionally, it will ensure that all document and workflow transactions are processed completely and accurately.

Security: Your business information is confidential and critical, therefore software security is a vital part of the application you are using across your enterprise. DocuClass offers robust and flexible security schema with several security layers. Additionally all users actions and system transactions are continuously tracked.

Scalability: As your business grows, the number of users and consequently the demands on the application increase. DocuClass addresses these expanding needs by being scalable and by applying an optimal utilization of available resources.

Easy of Configuration: An enterprise deployment usually implies that complex and different application configurations are required to attend different departments needs. DocuClass makes administrators life easier, with tight integration to Active Directory , global or department policies and easy of use – point & click – configuration tools

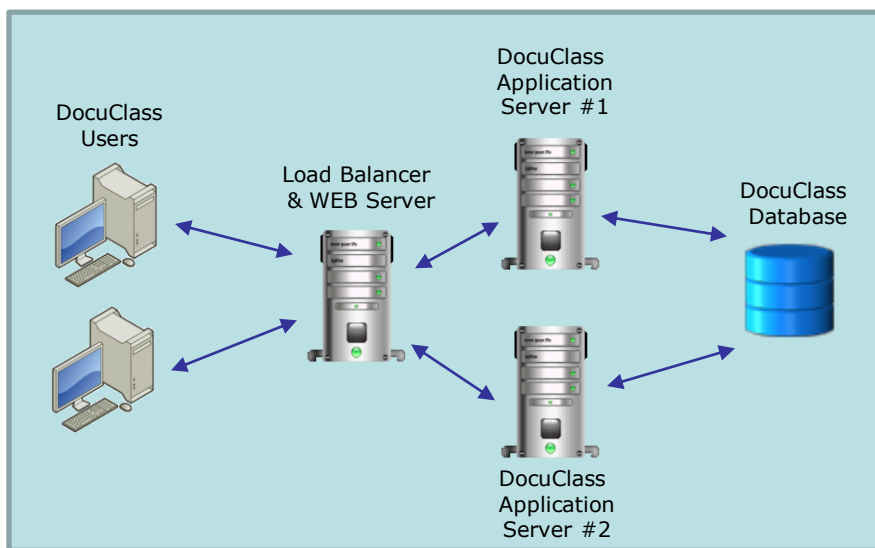

DocuClass as an Enterprise Wide Solution

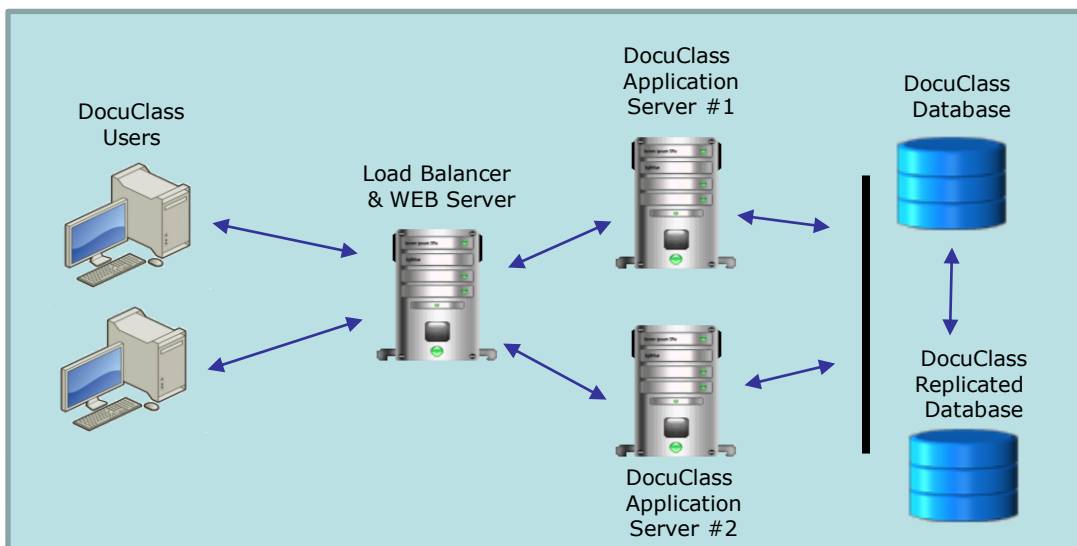

Cima Software Corp.
US Headquarters
235 Alpha Drive
Suite 300
Pittsburgh, PA 15238
Phone: +1 412-449-0080
Fax: +1 412-449-0042
Email: info@docuclass.com
European Office:
Xynda 7, Athens
111 41 Greece
Phone: +30 217 -731-0085
Email: sales.europe@docuclass.com

Redundancy and Fault Tolerance: DocuClass can take advantage of redundant and fault tolerant files repositories and database infrastructure architectures to guarantee business continuity..

Separate Testing (Staging) & Production Environments: Changes, fixes and improvements are tested on DocuClass staging environments, and moved to the production system as soon as acceptance test criteria are met, without disturbing the production environment.

Increase throughput on high demand: Two application servers are used to process users requests; all transactions with DocuClass users are "stateless". Therefore any user request can be serviced from any available Application Server. A Load Balancer will balance the load equally to available servers

An extended scenario: DocuClass databases are replicated. Replica database may be placed in a different physical location (i.e. remote site) and guarantee business continuity and disaster recovery
